

Look for enviro products with the grey water safe symbol on the label for use in the laundry and the bathroom.

- Be environmentally responsible and save water.
- Wash full loads or smaller loads using lower water levels.
- Approximately how much water does your machine use for a full load including wash, rinse and deep rinse?

Front Load Washing Machine = 75 litres and
Top Load Washing Machine = 150 litres.

- Look for the appropriate front or top machine symbol on enviroCLEAN laundry products.

- ✓ 100% Australian owned

Environmentally responsible

Laundry Products

Save water in your garden...

Knowing you can use grey water which is safe to use in your garden!

Our new and improved formulas have lower sodium levels and no phosphorous ingredients making the use of grey water safe for your garden. Be sure to use enviro products with the grey water safe symbol on the label if you wish to recycle grey water. New independent testing conducted by Lanfax Laboratories in June, 2007 concurs the enviroCLEAN products are low in sodium and have nil phosphorous.

What is grey water?

Grey water is the waste water from your shower, bath and laundry. **Black water** is from the toilet and is not suitable for distribution on your garden due to increased pollutants that could be harmful to humans, pets and the environment.

Look for the enviro informative brochures:
